*E*quidem iam complures abhinc annos apud animum constitueram generum botanicorum, quotquot in *Willdenovii speciebus* *) recensentur, catalogum in privatos vsus mihi excerpere; verum tamen variis negotiis impeditus eram, quo minus hoc facerem. Anno proxime praeterlapso quum nomenclatoris botanici, quem illustrissimus Comes Henkel a Donnersmark edidit, partis quartae tomus secundus forte fortuna primum ob oculos veniret, istiusmodi indicem me ibidem

*) *Caroli a Linné Species plantarum, exhibentes plantas rite cognitae ad genera relatas secundum systema sexuale digestas. Curante Car. Ludov. Willdenow. Tom. I—IV. Berolini 1797—1805.*

esse inuenturum laetatus sum. Postmodo vero quum priores partes eius operis nactus essem: proh dolor apparuit genera plantarum ordine alphabetico neutiquam in isto libro enumerata exstare. Quam ob rem exeunte auctumno proximo strenue hoc negotium adgressus quum suspicarer talem enumerationem alphabeticam generum vel aliis botanicis esse vtilem gratamque futuram, typis talem impressam publici iuris facere decrevi. Attamen, quo pretiosius locarem hanc opellam, genera botanica e *Persoonii synopsi plantarum*, *) istis coniunxi et catalogum comparativum generum botanicorum in ambobus illis operibus contentorum elucubravi. Quamquam enim parti utrique sequioris libri talis index subiunctus reperitur; nihilo secius, ob tot naevos ibi latentes, quippe paginarum numeris crebro perperam notatis, et compluribus generibus plane praetermissis, haud quaquam supervacaneum fore arbitratus sum, hoc praesenti catalogo curatiore impensam molestiam evolvendi praesertim tironibus, botanicis compendifacere.

*) *Synopsis plantarum seu enchiridium botanicum, complectens enumerationem systematicam specierum hucusque cognitarum. Curante Dr. C. H. Persoon. Pars I. et II. Parisiis Lutetiorum 1805 et 1807.*

Omnino quidem dolendum est, vtrumque hoc recentissimum et pro tempore ditissimum in universa re herbaria opus in tantum inter se discrepare, vt non solum complura genera in alterutro diversimode nuncupentur, verum etiam idem nomen subinde duo genera toto coelo diversa indigitet. Scilicet humana memoria tam immense patet, vt tot species plantarum post hominum memoriam inventas et descriptas non modo vnicum vnus cuiusque earum, sed bina imo plura nomina valeamus mente reposita servare! Persoonius vtique complura genera primus descripsit, eoque facto egregie de phytographia promeritus est, licet subinde mutuatus fuerit istas descriptiones ab inventoribus singularum plantarum; ast alia genera solummodo e pridem vulgo notis speciebus plantarum compaginavit, et rursus alia novis duntaxat nominibus insignivit, qua quidem opera sublestam apud genuinos botanicos gratiam inivit. Hasce differentias tali more modoque notabiliores reddere conatus sum, vt genus botanicum bifariam appellatum bis sub vtroque nomine allegarem; (v. c. Adenophyllum et Schlechtendahliam, Ginkgonem et Salisburiam etc.) porro vt nomini recenti generis e speciebus pridem vulgo notis conflati subiungerem nomen genericum pristinum, sed sub vetere nomine generico nuper adscitam nuncupationem

omitterem; (v. c. *Acynos* e *Thymi*, *Aloysia* et *Stachytarpheta* e *Verbenae*; *Anamenia* ex *Adonidis* speciebus concenturiata genera hanc sortem heic apud me experta sunt) denique vt vbi genus aliquot duntaxat in alterutro horum operum descriptum exstat, vel solum hoc opus sub tali nomine generico laudarem. Licet enim summa generum a *Persoonio* descriptorum a *Willdenovio* constitutorum generum enumerationem tricenis et undeseptuaginta nominibus superet: nihilo secius vel rursus aliquot genera, quibus synopsis caret, obveniunt in speciebus plantarum, praesertim in tomo vltimo, vbi sagacissimus investigator, nunc praematura morte botanicae ereptus graphice delineavit genera permulta, quae *Humboldt* et *Bonpland* nuper dum vastos *Americae anstralis* tractus longinquis itineribus perlustrarent dudum detexerunt ut *Aegopogon*, *Elyonurus* etc. Praesertim per annos proxime praeterlapsos sollertissimum studium in eruendis et describendis novis plantis impensum fuisse, id quidem limpide constat ex libro,*) cuius auctor delineationes plantarum nuperrime per decennium

*) *Beschreibung der vorzüglichsten neuen Pflanzen, welche im letzverflossenen Jahrzehend zuerst sind entdeckt und bekannt geworden; zusammengetragen von W. Brögelmann. Frankfurt a. M. 1812. 8.*

ab anno 1802 vsque ab 1812 praeterlapsum erutarum phytographiae compilavit, vbi vltra quinquaginta exstant genera vel Persoonio prorsus ignota. Quid? quod omnino synopsis plantarum praepropere corrassa videtur, quippe in qua non solum aliquot genera bis iisdem verbis descripta inveniuntur (v. c. *Fagraea* Nro. 483 et 603, *Gomara* Nro. 1452 et 1477) verum etiam vno eodemque nomine duo diversa genera insigniuntur (e. c. *Columellia* Nro. 47 et 1894) quin imo vel complura genera iam ab illustri Linnaeo constituta penitus silentio praetermittuntur (vt *Calla*, *Dracontium* etc.) Taceam de vitiis in indice obviis haud quaquam omnino typographo vitio vertendis.

Iam restat, ut de dispositione schediasmatis huius paucis exponam. Numeros, quippe in quibus cardo rei versatur digessi in columnas duas, quarum titulis indigitatur, priores numeros ad paginas e Persoonii synopsi plantarum sequiores vero e Willdenovii speciebus plantarum respicere. Nihil praetermisi, quo errores in singulis numeris committendos evitarem, quippe qui saepius repetito studio autographum meum emendavi, nec non typis expressa priora exemplaria antequam multiplicata publici iuris fierent ter correxi. Quum vero fieri nequeat: vt paginarum, vbi

quaevis genera descripta reperiantur numerus anti-grapho quasi quodam custodiretur, continue pro-currentem numerum, quo genus vnumquodque insignitum est huic praeposui. Quo facto demum septenae numerorum columnae sunt conflatae, quarum prima generis botanici, secunda partis, tertia paginae e synopsi plantarum Persoonii; quarta generis systematici, quinta partis, sexta tomi, septima denique paginae e Willdenovii speciebus plantarum, numeros exhibebit.

Prima numerorum series in ill. *Persoon Synopside Plantarum* generis numerum, secunda partem, tertia paginam; quarta in cel. *Willdenow Speciebus Plantarum* generis numerum, quinta et sexta partem et tomum, et septima paginam indicat.
